

4,214 injury accidents were recorded by the police in March 2025, an increase (+3%) compared with March 2024.

It is estimated that **231 people died on the roads of mainland France in March 2025**, compared with 257 in March 2024, a decrease of 10%. The number of fatalities decrease for car users (-19 killed), powered two-wheelers users (-13 killed) and cyclists (-5 killed), but is up for pedestrians (+6 killed). The number of fatalities decrease for the 25-64 age group (-18 killed) and for the 18-24 age group (-10 killed), but is up for the 65 and over age group (+4 killed). The number of deaths is down in all environments, with a more significant drop on rural roads (-13 killed).

1,262 people were seriously injured in March 2025, an increase (+8%) compared to March 2024 (according to the estimation method developed by ONISR on the basis of work by Gustave Eiffel University). This increase particularly concerns users of PMDs motorized (+37%) and cyclists (+11%).

Data source : ONISR - Data on accidents involving injuries recorded by police forces - Geographical area : France mainland

Labelled series for fatalities (definitives until 2023, quasi-definitives 2024), ONISR-UGE estimations for seriously injured, 2025 estimate based on data as of 2025/04/07

The trend over **the last 3 months (January-February-March)** is down compared with the same months a year ago:  
the number of people killed is down by -14% and the number of seriously injured is stable.

Information on injury accidents is recorded by law enforcement agencies, which are not systematically informed when the accident is not fatal. Therefore, the estimate of seriously injured people (according to the M.AIS3+ medical definition) is based on the findings of the police forces corrected by the ONISR-Université Gustave Eiffel model (Rhône Register).

## Evolution of the number of users fatalities cumulated on a rolling 12 months

**Overall**, fatalities over the last 12 months have decreased by -5% compared to the previous 12 months, and is down -5% compared to 2019, year taken as a reference for the 2020-2030 decade.

Since the pandemic, **car users** have accounted for just under half of all road deaths. Their fatalities over the last 12 months is estimated at 1,487 fatalities, down by -3% compared to the previous 12 months and down by -8% compared to 2019.

Fatalities among **powered two-wheeler** users is falling: 689 people were killed in the last 12 months, down by -5% on the previous 12 months, and down by -8% compared to 2019.

**Pedestrian** fatalities, is down: 451 pedestrians have died in the last 12 months, down by -5% on the previous 12 months, and down by -7% compared to 2019.

**Cycling** fatalities over the last 12 months is falling: 209 cyclists were killed, is down by -7% compared to the previous 12 months. However, this result is +12% higher than in 2019. The French are showing an interest in using individual modes of transport for short journeys in towns and cities, but they also use bicycles for leisure activities in rural areas.

Fatalities among **PMDs motorized** users is up by +4% over the last 12 months : 48 people were killed in the last year.

Fatalities among **young adults aged 18-24**, is falling: 509 young people were killed, a result down by -4% compared to the previous 12 months, and down by -7% compared with 2019.

Fatalities among people **aged 65 or over** stands at 859 people killed in the last 12 months, is down by -7% compared with the previous 12 months and up by +1 % compared to 2019.

Data source : ONISR - Data on accidents involving injuries recorded by police forces - Geographical area : France mainland  
Labelled series for fatalities (definitives until 2023, quasi-definitives 2024), 2025 estimate based on data as of 2025/04/07

## Evolution of the number of users seriously injured cumulated on a rolling 12 months

**Overall**, the number of seriously injured over the last 12 months is lower by -2% compared with the previous 12 months, and lower by -3% compared to 2019, year taken as a reference for the 2020-2030 decade.

**Powered two-wheeler** represent for a third of seriously injured; over the last 12 months, they are estimated at 5,000 seriously injured. This result is lower by -7% compared with the previous 12 months and lower by -13% compared to 2019.

**Car users** account for just under a third of seriously injured; over the last 12 months, they are estimated at 4,900 seriously injured, is stable compared to the previous 12 months and lower by -6% compared to 2019.

The number of **cyclists** seriously injured over the last 12 months is on the rise: 2,600 cyclists are thought to have been seriously injured over the last 12 months, is up by +1% compared the previous 12 months, and higher by +12% compared to 2019. Indeed, the French are showing an interest in using individual modes of transport for short journeys in towns and cities, but they also use bicycles for leisure activities in rural areas.

The number of seriously injured **pedestrians** is falling: an estimated 2,000 pedestrians have been seriously injured over the past 12 months, is down by -2% compared to the previous 12 months and by -14% compared to 2019.

The number of seriously injured **PMDs motorized**, with over 800 seriously injured in the last 12 months, is up by +17% compared to the previous 12 months.

The number of seriously injured among **young adults aged 18-24**, an age group at high risk of severe road crashes, is estimated in the last 12 months to 2,700 seriously injured, is down by -3% on the previous 12 months and down by -2% compared to 2019.

The number of seriously injured people among people **aged 65 or over** is estimated at 2,800 seriously injured over the last 12 months, higher by +4% compared with the previous 12 months and by +5% compared to 2019.

Serious victims in 2025 by mode of travel and road network

Over the last 3 months

**Overall**, the trend is **down** for road fatalities in urban area (-18%), on rural road (-12%), and on motorways (-8%).  
The trend is **down** for seriously injured in urban area (-3%), on motorways (-4%), and **up** on rural road (+3%) .

**In urban areas**, the trend is **down** for the road users except for users of PMDs motorized and for cyclists with serious injuries..

**In rural roads**, the trend is **up** for PMDs motorized, pedestrians killed and cyclists seriously injured. The trend is **down** or stable for other users.

**On motorways**, the trend is **up** for pedestrians and seriously injured car users, and is **down** for the other road users.

Pedestrians contain Personal mobility devices non-motorized (rollerblades, skateboards, classic scooters, etc.), which move in the same spaces as pedestrians on foot and are considered pedestrians in the highway code..  
Personal mobility devices (PMDs) motorized contains electric scooters, gyropods, hoverboards, segways, etc.; they move like a bicycle.  
Cyclists are users who move around on a bicycle, whether or not it is electrically assisted.  
Powered two-wheelers (PTW) include mopeds (less than 50 cc and with a maximum design speed not exceeding 45 km/h, including scooters less than 50 cc) and motorbikes (more than 50 cc, including scooters more than 50 cc).  
Car users are light vehicles (LDVs); vans are not included in this category.

The "urban area" road network refers to the lanes between the entrance and exit signs of a municipality.  
The "rural" road network refers to non-motorway roads outside the "urban areas" lanes.  
The "motorway" network concerns the traffic lanes with motorway status, indicated by blue signs.

Pedestrians contain Personal mobility devices non-motorized (rollerblades, skateboards, classic scooters, etc.), which move in the same spaces as pedestrians on foot and are considered pedestrians in the highway code.  
Personal mobility devices (PMDs) motorized contains electric scooters, gyropods, hoverboards, segways, etc.; they move like a bicycle.  
Cyclists are users who move around on a bicycle, whether or not it is electrically assisted.  
Powered two-wheelers include mopeds (less than 50 cc and with a maximum design speed not exceeding 45 km/h, including scooters less than 50 cc) and motorbikes (more than 50 cc, including scooters more than 50 cc).  
Car users are light vehicles (LDVs); vans are not included in this category.

Persons "under 18 years old" are children and adolescents aged 0 to 17 years old inclusive.  
Young people aged between 18 and 24 inclusive are the category most at risk in terms of road safety.

The "urban area" road network refers to the lanes between the entrance and exit signs of a municipality.  
The "rural" road network refers to non-motorway roads outside the "urban areas" lanes.  
The "motorway" network concerns the traffic lanes with motorway status, indicated by blue signs.

Data processing methods for France mainland

The BAAC file (Bulletin of Analysis of Road Traffic Accidents recorded by the Police Forces) includes injury accidents as defined in the decree of 27 March 2007 on the conditions for compiling statistics. The ONISR, which is responsible for the administration and dissemination of accident statistics under the terms of the decree of 15 May 1975 relating to the CISR, has long specified the methods for taking accidents into account.

**Method of adjusting injuries**

In order to comply with European statistical standards, the ONISR produces a new series of data on injuries for France mainland. It also integrates the AIS scale of injury severity (light or moderate, serious). These data are determined by a new method established jointly by the Gustave Eiffel University (UGE) and the ONISR. This method is based in particular on recent data relating to injuries recorded by the police, but aims to estimate the actual number of people injured in road accidents who are treated by hospital services: <https://www.onisr.securite-routiere.gouv.fr/etudes-et-recherches/victimes/blessures/methode-de-redressement-du-nombre-de-blesses-de-la-route> (in french).

**The monthly barometer**

The monthly barometer for a given month concerns accidents occurring up to the end of that month and is compiled and published the following month. Estimates are produced on the basis of accidents recorded in the TRAxY information system concerning BAAC data currently being entered, transmitted within 48 hours by the police to the ONISR.  
Serious injuries are estimated from the data on injuries recorded in TRAxY using the adjustment method mentioned above.

**Labelling**

The Public Statistics Authority has certified the main accident indicators from the BAAC file (France mainland and french overseas counties) for the quasi-definitive data for year N published at the end of January of year N+1, and the definitive data published from May of year N+1. For the years prior to 2021, the dashboard includes labelled data.

The statistical methods are specified on the ONISR website: <https://www.onisr.securite-routiere.gouv.fr/en/data-tools>.
