

4,599 injury accidents were recorded by the police in October 2025, an increase (+1%) compared with October 2024.

It is estimated that **276 people died on the roads of mainland France in October 2025**, compared with 318 in October 2024, representing an decrease of 42 fatalities. The number of fatalities decrease for car users (-26 killed), powered two-wheelers users (-10 killed), users of PMDs motorized (-3 killed) and pedestrians (-3 killed) but increase for cyclists (+7 killed). Mortality increase for those aged under 18 and those over 65 (+3 killed respectively) but decrease for those aged 18-24 (-19 killed) and those aged 25-64 (-27 killed). The number of fatalities decrease by 38 on rural roads and remained stable on motorways and urban area.

1,342 people were seriously injured in October 2025, a decrease of -2% compared to October 2024 (according to the estimation method developed by ONISR on the basis of work by Gustave Eiffel University). The decrease in the number of seriously injured affects powered two-wheelers users (-7%), car users (-5%) and pedestrians (-1%). The increase concerns users of PMDs motorized (+18%) and cyclists (+5%).

Data source : ONISR - Data on accidents involving injuries recorded by police forces - Geographical area : France mainland

Labelled series for fatalities (definitives until 2024), ONISR-UGE estimations seriously injured, 2025 estimate based on data as of 2025/11/07

The trend over **the last 3 months (August-September-October)** is up compared with the same months a year ago, the number of people killed is up by +4% and the number of seriously injured is up by +2%.

Information on injury accidents is recorded by law enforcement agencies, which are not systematically informed when the accident is not fatal. Therefore, the estimate of seriously injured people (according to the M.AIS3+ medical definition) is based on the findings of the police forces corrected by the ONISR-Université Gustave Eiffel model (Rhône Register).

## Evolution of the number of users fatalities cumulated on a rolling 12 months

**Overall**, fatalities over the last 12 months have increased by +1% compared to the previous 12 months, and is stable compared to 2019, year taken as a reference for the 2020-2030 decade.

Since the pandemic, **car users** have accounted for just under half of all road deaths. Their fatalities over the last 12 months is estimated at 1,567 fatalities, up by +2% on the previous 12 months and down by -3% compared to 2019.

Fatalities among **powered two-wheeler** users is falling: 688 people were killed in the last 12 months, down by -3% on the previous 12 months, and down by -8% compared to 2019.

**Pedestrian** fatalities, is down: 490 pedestrians have died in the last 12 months, up by +1% on the previous 12 months, and up by +1% compared to 2019.

**Cycling** fatalities over the last 12 months is falling: 221 cyclists were killed, is down by -1% compared to the previous 12 months. However, this result is up in +18% compared to 2019. The French are showing an interest in using individual modes of transport for short journeys in towns and cities, but they also use bicycles for leisure activities in rural areas.

Fatalities among **PMDs motorized** users is up by +71% over the last 12 months : 72 people were killed in the last year.

Fatalities among **young adults aged 18-24**, is falling: 506 young people were killed, a result down by -6% compared to the previous 12 months, and down by -8% compared with 2019.

Fatalities among people **aged 65 or over** stands at 934 people killed in the last 12 months, is up by +2% compared with the previous 12 months and up by +10 % compared to 2019.

Data source : ONISR - Data on accidents involving injuries recorded by police forces - Geographical area : France mainland  
Labelled series for fatalities (definitives until 2024), 2025 estimate based on data as of 2025/11/07

## Evolution of the number of users seriously injured cumulated on a rolling 12 months

**Overall**, the number of seriously injured over the last 12 months is up by +3% compared with the previous 12 months, and is up by +1% compared to 2019, year taken as a reference for the 2020-2030 decade.

**Powered two-wheeler** represent for a third of seriously injured; over the last 12 months, they are estimated at 5,100 seriously injured. This result is up by +2% compared with the previous 12 months and lower by -11% compared to 2019.

**Car users** account for just under a third of seriously injured; over the last 12 months, they are estimated at 4,900 seriously injured, is up by +2% compared to the previous 12 months and lower by -5% compared to 2019.

The number of **cyclists** seriously injured over the last 12 months is on the rise: 2,700 cyclists are thought to have been seriously injured over the last 12 months, is up by +8% compared the previous 12 months, and higher by +19% compared to 2019. Indeed, the French are showing an interest in using individual modes of transport for short journeys in towns and cities, but they also use bicycles for leisure activities in rural areas.

The number of seriously injured **pedestrians** is falling: an estimated 2,000 pedestrians have been seriously injured over the past 12 months, is down by -2% compared to the previous 12 months and down by -16% compared to 2019.

The number of seriously injured **PMDs motorized**, with over 1000 seriously injured in the last 12 months, is up by +29% compared to the previous 12 months.

The number of seriously injured among **young adults aged 18-24**, an age group at high risk of severe road crashes, is estimated in the last 12 months to 2,800 seriously injured, is down by -1% on the previous 12 months and is down by -1% compared to 2019.

The number of seriously injured people among people **aged 65 or over** is estimated at 2,800 seriously injured over the last 12 months, is up by +3% compared with the previous 12 months and is up by +7% compared to 2019.

## Serious victims in 2025 by mode of travel and road network

### Over the last 3 months

**Overall**, the trend is **up** for road fatalities in urban area (+4%), on rural roads (+2%) and on motorways (+26%). The trend is **up** for seriously injured in rural road (+3%) and on motorways (+11%), and is **down** in urban area (-1%).

**In urban areas**, the trend is **up** for pedestrians killed, users of PMDs motorized and for car users killed. The trend is **down** for pedestrians seriously injured, cyclists, powered two-wheeler users.

**In rural roads**, the trend is **up** for all the road users except for powered two-wheeler users and is down or stable for powered two-wheeler users seriously injured, users of PMDs motorized killed and car users seriously injured.

**On motorways**, the trend is **up** pedestrians and powered two-wheeler users and is down for car users.

Data source : ONISR - Data on accidents involving injuries recorded by police forces - Geographical area : France mainland  
Labelled series for fatalities (definitives until 2024), ONISR-UGE estimations for seriously injured, 2025 estimate based on data as of 2025/11/07

Pedestrians contain Personal mobility devices non-motorized (rollerblades, skateboards, classic scooters, etc.), which move in the same spaces as pedestrians on foot and are considered pedestrians in the highway code..  
Personal mobility devices (PMDs) motorized contains electric scooters, gyropods, hoverboards, segways, etc.; they move like a bicycle.  
Cyclists are users who move around on a bicycle, whether or not it is electrically assisted.  
Powered two-wheelers (PTW) include mopeds (less than 50 cc and with a maximum design speed not exceeding 45 km/h, including scooters less than 50 cc) and motorbikes (more than 50 cc, including scooters more than 50 cc).  
Car users are light vehicles (LDVs); vans are not included in this category.

The "urban area" road network refers to the lanes between the entrance and exit signs of a municipality.  
The "rural" road network refers to non-motorway roads outside the "urban areas" lanes.  
The "motorway" network concerns the traffic lanes with motorway status, indicated by blue signs.

Data source : ONISR - Data on accidents involving injuries recorded by police forces - Geographical area : France mainland  
Labelled series for fatalities (definitives until 2024), ONISR-UGE estimations seriously injured, 2025 estimate based on data as of 2025/11/07

Pedestrians contain Personal mobility devices non-motorized (rollerblades, skateboards, classic scooters, etc.), which move in the same spaces as pedestrians on foot and are considered pedestrians in the highway code.  
Personal mobility devices (PMDs) motorized contains electric scooters, gyropods, hoverboards, segways, etc.; they move like a bicycle.  
Cyclists are users who move around on a bicycle, whether or not it is electrically assisted.  
Powered two-wheelers include mopeds (less than 50 cc and with a maximum design speed not exceeding 45 km/h, including scooters less than 50 cc) and motorbikes (more than 50 cc, including scooters more than 50 cc).  
Car users are light vehicles (LDVs); vans are not included in this category.

Persons "under 18 years old" are children and adolescents aged 0 to 17 years old inclusive.  
Young people aged between 18 and 24 inclusive are the category most at risk in terms of road safety.

The "urban area" road network refers to the lanes between the entrance and exit signs of a municipality.  
The "rural" road network refers to non-motorway roads outside the "urban areas" lanes.  
The "motorway" network concerns the traffic lanes with motorway status, indicated by blue signs.

Data processing methods for France mainland

The BAAC file (Bulletin of Analysis of Road Traffic Accidents recorded by the Police Forces) includes injury accidents as defined in the decree of 27 March 2007 on the conditions for compiling statistics. The ONISR, which is responsible for the administration and dissemination of accident statistics under the terms of the decree of 15 May 1975 relating to the CISR, has long specified the methods for taking accidents into account.

Method of adjusting injuries

In order to comply with European statistical standards, the ONISR produces a new series of data on injuries for France mainland. It also integrates the AIS scale of injury severity (light or moderate, serious). These data are determined by a new method established jointly by the Gustave Eiffel University (UGE) and the ONISR. This method is based in particular on recent data relating to injuries recorded by the police, but aims to estimate the actual number of people injured in road accidents who are treated by hospital services: <https://www.onisr.securite-routiere.gouv.fr/etudes-et-recherches/victimes/blessures/methode-de-redressement-du-nombre-de-blesses-de-la-route> (in french).

The monthly barometer

The monthly barometer for a given month concerns accidents occurring up to the end of that month and is compiled and published the following month. Estimates are produced on the basis of accidents recorded in the TRAxY information system concerning BAAC data currently being entered, transmitted within 48 hours by the police to the ONISR. The final results for 2024 have been included in the May 2025 dashboard.  
Serious injuries are estimated from the data on injuries recorded in TRAxY using the adjustment method mentioned above.

Labelling

The Public Statistics Authority has certified the main accident indicators from the BAAC file (France mainland and french overseas counties) for the quasi-definitive data for year N published at the end of January of year N+1, and the definitive data published from May of year N+1. For the years prior to 2025, the dashboard includes labelled data.

The statistical methods are specified on the ONISR website: <https://www.onisr.securite-routiere.gouv.fr/en/data-tools>.
