Definitive data until 2024, provisional BAAC data stopped on 2025/12/08 for the year 2025

Pedestrians contain Personal mobility devices non-motorized (rollerblades, skateboards, classic scooters, etc.), which move in the same spaces as pedestrians on foot and are considered pedestrians in the highway code.

Personal mobility devices (PMDs) motorized contains electric scooters, gyropods, hoverboards, segways, etc.; they move like a bicycle.

Cyclists are users who move around on a bicycle, whether or not it is electrically assisted.

Powered two-wheelers include mopeds (less than 50 cc and with a maximum design speed not exceeding 45 km/h, including scooters less than 50 cc) and motorbikes (more than 50 cc, including scooters more than 50 cc).

Car users are light vehicles (LDVs); vans are not included in this category.

Data processing methods for French overseas territories

The BAAC file (Bulletin of Analysis of Road Traffic Accidents recorded by the Police Forces) includes injury accidents as defined in the decree of 27 March 2007 on the conditions for compiling statistics. The ONISR, which is responsible for the administration and dissemination of accident statistics under the terms of the decree of 15 May 1975 relating to the CISR, has long specified the methods for taking accidents into account.

The monthly barometer

The monthly barometer for a given month concerns accidents occurring up to the end of that month and is compiled and published the following month.

The data are produced from accidents recorded in the TRAxY information system concerning BAAC data currently being entered, transmitted within 48 hours by the police to the ONISR. **The final results for 2024 have been included in the May 2025 dashboard.**

The export from TRAxY is carried out at a date specified in the source; the results are provisional. No estimate is calculated on these data, which are small in number.

Labelling

The Public Statistics Authority has certified the main accident indicators from the BAAC file (France mainland and french overseas counties) for the quasi-definitive data for year N published at the end of January of year N+1, and the definitive data published from May of year N+1. For the years prior to 2025, the dashboard includes labelled data.

The statistical methods are specified on the ONISR website:

<https://www.onisr.securite-routiere.gouv.fr/en/data-tools>.
